SAMIR PANDEY

pandeysameer121@gmail.com | +91-9712272260 | Github | LinkedIn | Portfolio | Ahmedabad, Gujarat

Skills

Technical Skills: Python | NumPy | Pandas

Visualization Tools: Power BI | Advanced Excel (VBA, Macros)

Web Scraping Tools: Beautiful Soup | Scrapy

Databases: MySQL

DevOps & Version Control: GitHub | AWS | Netlify | Docker

Machine Learning: Scikit Learn | Artificial Intelligence

Work Experience

Bosch Rexroth | Digitalization Data Analyst **August 2026 - Present**

- Automated operational reporting using Power BI and low-code solutions, Improving data visibility and decision – Making.
- Developed Predictive analytics solutions using historical data to support proactive planning and business decisions.
- Built GenAI/RAG-based solutions to accelerate technical requirement analysis and checklist generation.

Sun Pharma | Data Analyst **June 2025 – August 2026**

- Automated and streamlined Data reports using **Advanced Excel**, reducing manual work by **40%**.
- Created interactive dashboards in **Power BI** for real-time tracking of KPIs across departments.
- Used **SQL** to extract and analyze operational data, supporting key business decisions with accurate insights.

Prodigy Infotech | Data Science Intern **June 2024**

- Analyzed large datasets and performed data cleaning using Python (Pandas, NumPy), leading to a 30% improvement in data processing efficiency.
- Built machine learning models for social media sentiment analysis, increasing sentiment classification accuracy by 25%.
- Implemented advanced exploratory data analysis (EDA) techniques to derive actionable insights, optimizing client reporting processes by 20%.

Education

Parul University, Vadodara **2021 - 2025**

- B.Tech in Computer Engineering | CPI: **7.18**
  Specialization: Big Data Analytics

Relevant Coursework: Object Oriented Programming, DBMS, Discrete Mathematics, Data Structures and Algorithms, Operating Systems, Computer Networks, Design and Analysis of Algorithms, Software Engineering, Artificial Intelligence, Machine Learning, Cryptography and Network Security, IoT

Projects

IPL Power BI Dashboard | Personal **April 2025**

Data Analyst

- Designed and developed an interactive **IPL analytics dashboard** in **Power BI**, visualizing team performance, player stats, season-wise comparisons, and win margins.
- Cleaned and transformed raw IPL datasets using **Power Query** and **DAX**, enabling dynamic filtering and real-time data insights across multiple dimensions (teams, players, venues).

Key Highlights: Delivered a fully interactive IPL dashboard in Power BI with insightful visualizations and dynamic filters, enabling users to explore match outcomes, team performance, and player contributions with ease.

Cyber Bullying Detection: Safe Talk | Parul University **April 2024**

ML / Python Developer

- Developed a web-based application using Python and Flask to detect and prevent cyberbullying in real-time, leveraging a BERT-based model for accurate text analysis and classification.
- Processed and analyzed a dataset of 20,00,000 examples, implementing data wrangling techniques and statistical methods to improve model performance and reduce false positives.

Key Highlights : Developed a real-time cyberbullying detection web application using a BERT-based model, processing cleaning a dataset of 20,00,000 examples. Integrated real-time notifications and messaging APIs for swift intervention.

Headcount & Attrition Automation | Sun Pharma **September 2025**

Data Analyst

- Automated headcount and attrition tracking using VBA Macros and Excel, eliminating manual monthly report compilation across HR data sets.
- Built nested logic for tenure-based employee categorization and bucketing, streamlining classification for workforce reporting.

Key Highlights: Delivered an automated Excel-based headcount and attrition tracking system using VBA Macros, eliminating manual monthly compilation and improving reporting accuracy for HR and MIS teams.

Skill Assessment AI Bot | Sun Pharma **March 2026**

AI/Automation Developer

- Built an AI-powered Skill Assessment chatbot using Microsoft Copilot Studio, deployed across 17 manufacturing sites in India to automate skill evaluation for plant employees.
- Developed backend workflow integrating Copilot API with file-upload processing, generating assessment results and returning output through the chatbot within 10–25 seconds.
- Enabled dashboard-style result visualization directly through the chatbot interface, giving non-technical Plant HR users real-time access to assessment outcomes without manual compilation.

Key Highlights: Delivered a live AI chatbot for skill assessment automation across 17 manufacturing sites, integrated with file-processing backend and real-time dashboard output, adopted by Plant HR teams for instant results.
